Describe and visualize data, uncover the relationships hidden in your data, and get answers to the important questions so you can make informed, intelligent decisions. Sun, 09 Dec 2018 04:52:00 GMT Statistical analysis, regression, ANOVA, ANCOVA, & PCA ... - The general linear model or multivariate regression model is a statistical linear model. It may be written as  $Y = X\beta + \epsilon$ , where Y is a matrix with series of multivariate measurements (each column being a set of measurements on one of the dependent variables), X is a matrix of observations on independent variables that might be a design matrix (each column being a set of observations on one of the ... Sun, 09 Dec 2018 18:57:00 GMT General linear model - Wikipedia - In statistics, a covariate represents a source of variation that has not been controlled in the experiment and is believed to affect the dependent variable. The aim of such techniques as ANCOVA is to remove the effects of such uncontrolled variation, in order to increase statistical power and to ensure an accurate measurement of the true relationship between independent and dependent variables.
